

OptiView — PRD

Comprehensive Management System for Optical Stores & Patient Portal

1. Executive Summary

OptiView is a SaaS web application in the form of an administrative dashboard, designed for the comprehensive management of optical stores (eyeglasses/glasses stores), accompanied by a **separate patient portal**. The design should be clean, professional, modern, and functional, inspired by the aesthetics of tools such as **Linear, Notion, or Stripe Dashboard**: plenty of whitespace, clear typography, restricted colors, and zero visual noise.

2. Business Context

An optical store receives patients who need glasses. The optometrist performs a visual examination and generates an **optical prescription** with values for each eye: sphere (SPH), cylinder (CYL), axis (AXIS), addition (ADD), and pupillary distance (PD).

With this prescription, the patient chooses a **frame** and a type of **lens** (single vision, bifocal, or progressive) with optional treatments (anti-reflective, photochromic, blue filter). All of this is consolidated into a **work order (WO)** that is sent to an optical laboratory to cut and mount the lenses. When they are ready, the patient picks up their glasses and pays (they may make partial payments).

3. Users and Roles

Role	Description
Administrator	Manages everything: inventory, reports, configuration, and system users.
Optometrist	Registers patients, creates optical prescriptions, and views visual history.
Salesperson	Creates work orders (selects frame + lens + prescription), generates quotes, and records payments.
Patient External Portal	Views their prescription, checks their order status, reviews outstanding balance, and receives check-up reminders.

4. Visual Direction and Design System

4.1 Color Palette

- **Primary color:** Teal (#0D9488) — associated with visual health, trust, and clarity.
- **Semantic accents:**
 - Green → Success / completed
 - Amber → Warnings / in progress
 - Red → Errors / low stock
 - Blue → Information
- **Backgrounds:** Very light gray/slate (#FCFDFD) for canvas, white (#FFFFFF) for cards and panels.

4.2 Typography & Shape

- **Typography:** Modern sans-serif (Inter, SF Pro, or similar). Only two weights: **regular** (body) and **medium** (titles and highlighted data). No aggressive bold.
- **Borders & Shape:** Hairline borders (1px light gray #E2E8F0). Soft rounded corners: 8px for controls, 12px for cards. Flat aesthetic with zero decorative shadows or gradients.
- **Iconography:** Consistent outline style (Tabler Icons or Phosphor Icons).

5. Navigation Structure

5.1 Main Layout (Administrator / Optometrist / Salesperson)

- **Fixed Left Sidebar:** Logo "OptiView" + eye icon. Main section (Dashboard, Patients, Work Orders, Inventory). System section (Billing, Reports, Settings). Sidebar footer with store context (e.g., "*Óptica Central — Neiva, Huila*").
- **Content Area:** Located to the right of the sidebar, featuring a contextual header for each screen.

5.2 Patient Portal (Separate Design)

- Mobile-first layout without a sidebar. Bottom tab bar or stacked-card navigation. Warmer, friendlier tone with minimal complexity.

6. Functional Requirements — Screens

6.1 Dashboard

Answers "*how is the day going?*" within 3 seconds of logging in.

- **Top Bar:** Greeting ("Good morning, [name]") + current date + primary "New Order" button.
- **4 Metric Cards Row:** Orders today (% change), Daily billing (in COP + % change), New patients (this week), Orders pending delivery.
- **Left Panel (60% width) — "Recent Orders":** Table/list with patient avatar, name, brief frame + lens details, status badge, total amount.
- **Right Panel (40% width) — "Alerts":** Notifications coded by severity: Low stock (red), Overdue check-ups (+12 mos, amber), Outstanding receivables (>30 days, blue), Laboratory stagnation (amber).

6.2 & 6.3 Patients (List & Detail Record)

- **List Screen:** Search bar (name/document), patient rows with avatar initials, document number, insurer, date of last visit.
- **Details Screen:** Breadcrumb, large avatar, health insurance provider, age, quick actions ("Edit", "New Order").
- **3-Tab Interface:**
 - **Information Tab:** Personal contact info, next check-up highlight, summary of total visits and outstanding balance.
 - **Prescription Tab:** OD/OS values table (SPH, CYL, Axis, ADD, PD) in monospace typography. Optometrist metadata and subtle teal recommendation banner (e.g., "*Recommended type: Progressive — Presbyopia detected*").
 - **History Tab:** Vertical timeline with visual evolution of OD/OS values and lens types over time.

6.4 & 6.5 Work Orders (List & Workflow Details)

The core operational flow of the system.

- **Filter Chips:** All, In Laboratory, Ready, Pending Payment (teal background for active state).
- **Progress Bar & 5-Step Workflow:**

1. Quote ✓	2. Approved ✓	3. In Laboratory	4. Ready	5. Delivered
------------	---------------	------------------	----------	--------------

- **Order Breakdown Column:** Frame reference, Lens type & material, Treatments, Assigned Lab, Fitting Height, Estimated Delivery (highlighted in teal).
- **Billing Column:** Itemized totals, amount paid (green), balance due (red if applicable), and "Record Payment" modal trigger.

6.6 Inventory

- **Top Controls:** Grid/list toggle + "Add Frame" button. Search by brand, model, or reference.
- **4 Metric Cards:** Total frames, inventory value, low-stock items (red), active suppliers.
- **Views:** Grid cards or compact list rows displaying frame image/icon, reference name, brand, color, price, and color-coded stock alerts.

6.7 Patient Portal (Mobile-First App)

- **Header:** Personal greeting + subtitle "Your eye health up to date".
- **Active Order Card:** Progress bar, status badge, estimated delivery date.
- **Prescription Card:** Clean, read-only table for OD/OS specs.
- **Quick Cards Grid:** Next annual check-up date & Outstanding balance with "Make Payment" action.

7. Key Interaction Flows

1. **Create Work Order:** Salesperson selects patient → picks active prescription → picks frame from live inventory → selects lens & treatments → verifies summary → confirms (auto-deducts stock).
2. **Advance Order Status:** User clicks "Advance Status" → modal confirmation → advances step → notifies patient automatically.
3. **Register Patient + Prescription:** Optometrist registers patient demographic info → enters OD/OS optical grid (sphere, cylinder, axis, addition, PD) → saves to visual timeline.

8. UX Principles & Guidelines

Principle	Implementation Rule
Information Density	Fair density; neither sparse nor cluttered. Each screen answers one clear goal.
Progressive Disclosure	Lists display minimum core attributes; detailed views expose complete parameters.
Status Visibility	

	Status badges and stock metrics are immediately visible without opening sub-menus.
Consistency & Actions	Uniform card, table, badge patterns; always one prominent primary action per screen.

9. Design Constraints — What NOT to Do

Strict Design Rules

- **No heavy box shadows:** Use flat designs with hairline 1px borders (#E2E8F0).
- **No dark modes or gradients:** Maintain light slate canvas and white cards.
- **No filled/solid icons:** Use outline-only icons for visual consistency.
- **Strict typography limit:** Maximum 2 font weights (Regular & Medium).
- **No color overload:** Restrict color to statuses, alerts, and primary teal actions.
- **No generic "Lorem Ipsum":** Use realistic Colombian optical data (COP currency, local names, real brands like Ray-Ban, Oakley).

10. Out of Scope

This document focuses explicitly on **Interface Design (UX/UI)** and functional layouts. Technical architecture (database schemas, APIs), security/auth permissions model, and lab/payment integrations are out of scope and reserved for technical specifications.
